Gitesh Kumar

Software Engineer

7081833800 · giteshb260@gmail.com · Noida · gitesh.dev · github.com/Gitesh1712 · https://leetcode.com/u/GiteshKumar/

SKILLS

Languages	Java · JavaScript · Python
Frontend	React.js · Tailwind CSS
Backend	Spring Boot · Node.js · FastAPI · REST API · Microservices
Databases	MySQL · PostgreSQL · MongoDB · pgvector
DevOps & Infra	AWS (EC2, RDS, S3) · Docker · NGINX · CI/CD · Git
CS Fundamentals	Data Structures & Algorithms · OOPs

WORK EXPERIENCE

Senior Software Engineer — Pareekshn Online Assessments *Jun 2024 – Present*

Designing and delivering scalable systems using Spring Boot and Node.js, building secure REST APIs, optimizing MySQL queries, and handling concurrency for high-load workflows. Developing React.js interfaces with clean state management and seamless API integration.

PROJECTS

Survey Platform — *Bihar Industrial Area Development Authority*

- Delivered a production-grade government survey platform for BIADA, enabling field data collection across distributed surveyor teams — replacing a fully manual process with a digitized, auditable workflow
- Eliminated data tampering risk across field operations by implementing AES-256 encryption, geo-fencing, GPS tracking, IP logging, and RBAC — securing sensitive government survey data end-to-end
- Reduced reporting turnaround by 30% via automated PDF/Excel generation and real-time analytics dashboards consumed by decision-makers
- Scaled platform to handle high-concurrency field submissions on AWS (EC2, RDS, S3) with JWT auth and query optimization — ensuring zero downtime during peak survey drives

Pareekshn — Assessment Admin Panel ·

- Owned end-to-end delivery of the Pareekshn admin platform, reducing assessment setup time by consolidating exam creation, candidate allocation, scheduling, and result publishing into a single unified system
- Engineered real-time scoring engine supporting concurrent assessments across multiple roles (assessor, admin, candidate), ensuring result accuracy and eliminating manual score computation
- Cut post-assessment processing time by automating PDF/Excel result generation and audit logging — removing a multi-hour manual effort per assessment cycle

RAG Chatbot — Legal & Policy Document Q&A · *Side Project*

- Designed a citation-enforced RAG pipeline for structured legal document Q&A (Acts, Circulars, Orders) using FastAPI + PostgreSQL + pgvector
- Built structure-aware chunking with legal section detection (regex + LangChain) and BAAI/bge-large-en embeddings (1024-dim) for high-precision retrieval
- Implemented a retrieval confidence gate — LLM is never called if similarity score falls below threshold, preventing hallucinations
- Containerized with Docker Compose (FastAPI + pgvector + Nginx); supports GPT-4, Gemini, Claude, and local Llama 3 as pluggable LLM providers

EDUCATION

B.Tech — Computer Science & Engineering · IMS Engineering College, Ghaziabad · 2018 – 2022 · GPA: 7.3/10
